

The PurpleSeal Isolation Plug

Premium design and high performance at a great price

The PurpleSeal™ Isolation plug is an all-composite frac plug that provides temporary isolation from the zones below after a frac. The plug contains powdered-metal buttons in the upper and lower slip and is rated to 10,000 psi from above and 7,000 psi below. Proprietary high-strength composite materials ensure uniform performance and durability. Interlocking castellations on the slips and end caps and a contoured interface between the slips and cones eliminate component rotation to ensure even, concentric slip expansion. With minimal metallic content — approximately 1% — PurpleSeal Isolation plugs drill out in 8 minutes or less.

Features and Benefits

- Provides temporary isolation from both above and below the plug
- Anti-preset features in both the plug and wireline adapter kit
- Proven seal back-up ensures superior sealing performance
- Available with the PurpleSeal Express™ single-use, disposable setting tool
- Can also be deployed on all conventional setting tools
- Pump-down wiper is included for every plug (use is optional)

Casing Size in.	Casing Weight lb/ft	Pressure Rating from above psi	Pressure Rating from below psi	Plug OD in.	Plug OAL in.	Part Number
5.500	20.0–23.0	10,000	7,000	4.380	19.00	0036656
5.500	17.0	8,000	7,000	4.380	19.00	0036656

NOTE: This plug is to be used for frac stages and temporary zonal isolation only. It is not designed for use as a conventional bridge plug or cap plug.
